

SAVE TIME & MONEY.

SAVE LOTS OF TIME & MONEY.

Pentalym offers hospitals a solution to efficiently and quickly track their equipment, inventory, specimens and patients.

In hospitals, where substantial amounts of money are involved in daily stock transactions, having a clear understanding of stock usage and waste is crucial. Pentalym provides a solution by offering smart tags that can be easily attached to various items such as stock, uniforms, and equipment at a low cost. These smart tags enable hospitals to achieve transparency and visibility over their current stock, ensuring efficient management and reducing unnecessary expenditures.

By implementing Pentalym's smart tags, hospitals gain real-time visibility into the location and usage of their stock, creating a transparent and easily accessible record. This level of visibility

allows for better inventory management, preventing over-procuring and minimising wastage. With accurate information on stock levels and usage, hospitals can make informed decisions regarding procurement, ensuring they have the right amount of stock needed without excess or shortage.

Pentalym's smart tags provide hospitals with the means to optimise stock management processes, reduce waste, and make more informed and cost-effective decisions. By having a clear picture of stock availability and usage, hospitals can effectively allocate resources, improve operational efficiency, and ultimately enhance financial outcomes.

TRACK
Efficiently and quickly locate equipment to streamline patient care

By utilising Pentalym's unique tags and fixed tagging hardware, hospitals can effectively track the movement of their equipment within their facilities.

SAVE
Validate stock in real time to reduce waste

By utilising RFID, Pentalym ensures that stock levels are accurately validated in real-time, enabling effective replenishment as items are removed from the shelves.

FIND
Pinpoint lost supplies quickly to optimise inventory management

With unique identification tags and handheld scanners, Pentalym's solution streamlines searches both online and offline.

FOLLOW
Improve patient visibility to provide better care

Pentalym tags enable clear tracking of patients throughout the hospital, offering valuable insights into their location and movements.

COUNT
Stocktake multiple items within seconds to save time

With Pentalym smart tags and handheld scanners, inventory counting of multiple items can now be accomplished in seconds.

RECORD
Capture data and track specimens to improve workflow efficiency

Pentalym's unique identification tags can overcome the hurdles associated with accurately recording the movement of specimens and samples.
